PROFILE

Full-stack developer comfortable at **every layer of a web product** — data model, REST API, authentication, file handling, and the interface people actually use. I have shipped a live platform on Node.js, Express and MongoDB, built a FastAPI retrieval service behind a React interface, modelled an eight-entity relational schema in Java and MySQL, and designed a complete two-role application in Figma for an external client. Final-year Software Engineering student, and a recent machine learning engineering intern at FlyRank AI.

EXPERIENCE

Machine Learning Engineering Intern — FlyRank AI

Jul – Aug 2026

Remote · Sarajevo, Bosnia and Herzegovina · Python · DuckDB · scikit-learn · GitHub Actions

- Built a page-ranking model on an **81-million-row search warehouse**, queried in place with DuckDB over cloud Parquet. Precision@50 rose from 0.492 to 0.784 against a 0.216 base rate under a client-grouped, time-aware split.
- Reported the caveats beside the result: half the gain rides on click history, and a deliberate leakage test moved R^2 from an honest 0.037 to a flattering 0.874 before the offending column was removed.
- Published the capstone **research paper** as a self-contained page, audited against the Pineau reproducibility checklist, arguing against its own headline where the evidence did.

PROJECTS

DecisAI — AI bid-response & RFP decision system

CUST Hackathon 2026

React · FastAPI · Python · ChromaDB · Sentence Transformers

- Built the retrieval layer that matches each requirement in a tender against the company's real delivery record, and **flags "no capability match" rather than drafting a plausible answer**.
- Ran a 500-page tender end to end — 91 requirements extracted, each checked against evidence — with dual online and offline inference so documents never have to leave the network.

Bongupid Games — full-stack hosting platform

2026

Node.js · Express · MongoDB · REST · JWT · Vanilla ES6 SPA

- Designed and shipped the whole stack: an **Express REST API** with JWT auth and role-separated admin endpoints, a Mongoose data model, and a multipart pipeline that validates and extracts uploaded ZIP builds into playable routes.
- Wrote the client as a 2,451-line single-page app in vanilla JavaScript on a token-based stylesheet. Live at submission with 15 published builds and 11 users.

AI Makkah Travels — bus booking app, user & admin

Client project

Figma · UI/UX design · Interactive prototype · designed for an external client

- Designed the complete product as a **clickable prototype across 25+ linked screens** — two role-based flows, passenger and admin. Seat selection is **gender-aware across a 45-seat map**.
- The two ends close one operational loop: passengers book, upload a payment receipt and cancel; the admin side verifies those payments, processes the refunds, and manages destinations, buses and users.

- Modelled eight entities with many-to-many asset-to-project links, and specified a five-layer architecture separating UI, business rules and data access.
- Authored a **29-page UI specification** with the design system defined in tokens, then built HTML prototypes of three screens against it.

Portfolio & research site — saad-imran-toori.github.io2026 · Live

Hand-written HTML5 & CSS3 · JavaScript · GitHub Pages · no framework, no build step

- Audited on a real phone and in headless Chromium at four widths: eliminated horizontal overflow, corrected a WCAG AA contrast failure, and raised every tap target to the 30–45 px range.

Also built: a multi-layer automated test framework for an e-commerce admin panel (Selenium WebDriver & Grid in Docker, JUnit 5, PHPUnit, Postman) · an unbeatable Tic-Tac-Toe AI using Minimax with depth-based evaluation (Python, Pygame) · RepoWiz, a document-grounded agent whose read-only tool permissions make writing structurally impossible.

TECHNICAL SKILLS

AI & Machine Learning	Retrieval-augmented generation · Sentence Transformers · ChromaDB · prompt engineering · Model Context Protocol (MCP) · agent design and guardrails · scikit-learn · pandas · grouped and time-aware validation · leakage detection
Design	Figma — user flows, interactive prototyping, component libraries · design tokens · UI specification · WCAG contrast and tap-target auditing
Languages	Python · JavaScript (ES6) · Java · C# · PHP · SQL · HTML5 · CSS3
Web & Back-End	Node.js · Express · REST API design · FastAPI · React.js · AngularJS · jQuery · Tailwind CSS · MongoDB · MySQL / MariaDB · DuckDB · Entity Framework · LINQ
Testing & Tooling	Selenium WebDriver & Grid · Docker · JUnit 5 · PHPUnit · Postman · Maven · Git & GitHub · GitHub Actions · Jira (Agile)

EDUCATION

BS Software Engineering — Capital University of Science & Technology, IslamabadExpected 2027

CGPA 3.66 / 4.00

Relevant coursework: Artificial Intelligence · Data Structures & Algorithms · Database Systems · Web Engineering · Software Design & Architecture · Software Construction & Development · Automated Software Testing · Information Security

CERTIFICATIONS

FlyRank AI	Certificate of Completion — Machine Learning Internship ; capstone accepted. Credential FR-D11-F1DDA-CDAA7, publicly verifiable (Sep 2026)
Google (Coursera)	Google AI Essentials and Google Prompting Essentials specializations, plus six Google AI courses — Fundamentals, Research & Insights, Brainstorming & Planning, Writing & Communicating, Content Creation, Data Analysis (Jul – Aug 2026)
Anthropic Academy	AI Fluency: Framework & Foundations · Claude 101 · Introduction to Claude Cowork · AI Capabilities and Limitations · AI Fluency for Students · Introduction to Agent Skills (Jul – Aug 2026)
Atlassian (Coursera)	Agile with Atlassian Jira (Jul 2026)
